

ABSTRACT

A cigar tobacco paper and a method for packaging the same is provided. The cigar tobacco paper is packaged with an enveloping means to hold a cylindrical shape. The cigar tobacco paper is rolled into cylindrical shape and placed within an enveloping means. The tobacco paper is wrapped into cylindrical form causing the cigar tobacco paper to form a plurality of layers in cylindrical form. The rolled tobacco paper is then placed inside a enveloping means having a diameter larger than the diameter of the rolled cigar tobacco paper. The encased tobacco paper within the enveloping means allows for the tobacco paper to keep a cylindrical shape until delivered and used by a consumer. The enveloping means may maintain the moisture and the flavor of the cigar tobacco paper prior to delivery to a consumer.
